

## Ethernet Transport = Dedicated Internet

For businesses that rely on heavy Internet usage for their daily operations, Pioneer offers a dedicated Internet (ETS) solution that is much more robust than standard DSL Internet or cable data connections. Our dedicated Internet offers a private, non-shared solution with symmetrical upload and download speeds for optimal data transferring. And for businesses with mission critical data and zero tolerance for downtime, you'll find Pioneer dedicated Internet gets the job done!

### FEATURES

- Symmetrical upload and download speeds.
- Consistent speed throughout the day not impacted by peak internet usage periods.
- Use with hosted applications like Fax-to-Email or Web and Audio Conferencing.
- Full range of bandwidth options to give you maximum flexibility, up to 1Gbps.
- Connect remote employees or multiple locations to your network using VPN.
- Connect PBX's, key systems or Pioneer's Hosted VoIP solutions.
- Access to customer portal to monitor bandwidth usage and metering.

### BENEFITS

- Never compete for bandwidth thanks to dedicated, non-shared internet access.
- Alleviate the worry of an outage with Pioneer's ETS agreement which guarantees 99.99% uptime.
- Transfer sensitive information via a private connection.
- Meet regulatory privacy requirements for banks and financial institutions
- Symmetrical upload speeds to send large data such as medical records, large x-rays, financial data, virtual reality tours, MSL listings, architectural renderings and multimedia files.
- Batch loads to online databases or private databases.
- Stream video and utilize video services.
- 24/7 local technical support with priority treatment for businesses.
